Classes

Objects

- Think of a cat
- What does your cat look like?

Objects (continued)

- What makes a cat?
- What do cats do?
- Attributes
  - what describes the object
- Behaviors
  - what can an object do?

Terms

- class - think of as the template/blueprint of an object
- instance - actual created object
- attribute - characteristics of a class object
- method - behavior of a class object

Creating a class

- __init__ - a constructor, creates the class object
- self - a term used to reference an instance of an object

Behaviors

- methods are a way for us to enable behavior for a class object
- getters/accessor
- setters/mutators

Dunder Methods

- special built-in methods that have default behaviors
- can be altered to change their outcomes
